SUBJECT: Coencisa 300TTL Modem

This is a 300 baud Modem which is specified as complying with CCITT V21. It is meant for direct connection to the telephone network and auto answer is available as an option. It supports a wide range of line voltages. The Modem performed satisfactorily in all tests I conducted. I did not evaluate the unit for full CCITT compliance.

The Modem cannot be connected to the telephone network in the United States. It appears that substantial changes would be necessary to allow the Modem to be registered for such connection. Its compatability with foreign exchanges would have to be evaluated on a case by case basis. It could, of course, be used with a manual RCD and an Adapter-Phone.
